

DELL STATEMENT – SWEDWATCH REPORT

We share SwedWatch's commitment to ensuring the safety and well-being of people working in supply chains and holding our [due diligence and assurance processes](#) to account by customers and stakeholders.

This is why [our assurance programs](#) are fully aligned with international frameworks such as the UN Guiding Principles and ILO Conventions.

We continuously assess risks across 1,500+ final assembly, direct and sub-tier suppliers, including those based in the Philippines. This risk-based approach program incorporates factors, such as Human Rights Impact Assessments and geographical location, underpinned by [policies](#) dedicated to [chemical use](#) and [restricted materials](#).

Our work is informed by multi-stakeholder input, including the [Clean Electronics Production Network](#) (CEPN), in the case of chemicals, reducing exposure and removing hazardous substances through mapping use, completion of remedial actions where necessary and capability-building.
